

Free water surface flow constructed wetland system and natural wetland restoration project at Jilin province, China

Owner:
Momoge National Nature Protection
Area Management Bureau
Jilin province, China

**Treatment of polluted rice field
irrigation water by constructed
wetlands and restoration of natural
wetlands for wildlife protection**

Planning and design, construction supervision:
Blumberg Engineers, Germany and
Landcity International, China

Daily wastewater volume: 50.000 m³/d
Discharge only from April up to October

Total design area: 681 ha

Planning: Since November 2010
Construction: Start of construction in
March 2012

Constructed wetlands (horizontal flow): 110 ha

Artificial Lake area: 40 ha

Restoration of natural wetlands : 446 ha

Final evaporation area (salt pan): 85 ha

Special features:

- Cold winters (-30 °C)
- High salinity of soils, no recipient, high diversity of waterfowl.
